PagePlus Keyboard

This keyboard was created with the Microsoft Keyboard Layout Creator 1.4. The shortcuts available in PagePlus are limited and not always intuitive.

Although WebPlus X2 and PagePlus X3 allow users to assign almost any command to most key combinations, one cannot assign text characters, except for a those that are already on the menus.

The PagePlus keyboard allows users to type many extended characters using dead keys or Ctrl-Alt combinations, or the AltGr key on UK Keyboards.

Note: This keyboard works system wide. Select it from the Language Bar in the System Tray. Shortcuts assigned in PagePlus or other programs will over-ride any in the Windows PagePlus keyboard.
